Before you choose an investment

Investing in stocks and shares can be a risky business, so you'll want to know all the facts before you commit to anything.

We provide an execution-only service, which means we simply do what you tell us, rather than giving you advice on how to invest.

One thing worth mentioning upfront about the stock market is that nothing is for definite, but over a longer term the stock market could offer better returns than savings accounts.

1. Is it right for you?

You really should be thinking long term, say five years or more. If you don't want to put your money away for that long, a savings account could be better for you.

2. How much can you invest?

Think about how much money you can put away. And make sure you read all of the terms and conditions in full before you commit. Some of our products come with charges, so make sure you understand exactly what you're paying for.

3. What price do you put on risk?

There are no two ways about it, with share dealing, you might not get back what you put in. Past performance is not a reliable indicator of future results. The levels of taxation might change, and any tax advantages really depend on your own situation. Some investments are riskier than others too, so think carefully about how much risk you're happy with before you invest.

You should also see investments like this as an extra to savings, not an alternative, and only trade with money you can afford to lose.

When investing, think about creating a balanced portfolio of different savings and investments. By spreading your investments, it may help to reduce your risk.

We don't provide advice so if you are unsure about making your own investment decisions, please seek advice from a suitably qualified Financial Adviser. There will normally be a charge for that advice.

The difference between saving and investing

Savings

Nobody knows what's around the corner. That's why if you can afford to save, it's a good idea to set aside money for your future. With an easy access savings account, you have access to your money and can generally make withdrawals when you need to. In return you earn interest. This is a low risk way to save your spare money.

Funds held in a savings account are generally more secure and accessible and provide more predictable growth.

Investing

Investing is also a process of setting aside money, but this involves more risk. You could be investing in shares, property, securities and other asset types, whose prices rise and fall as the market changes. Although there's a higher risk with investing, there's also the chance for a higher return than through savings.

The value of investments and income from them can go down as well as up and cannot be guaranteed. Consequently investors may not get back the amount they originally invested.

Medium to long-term goals

For medium to longer-term goals, it could be worth thinking about investments as inflation can reduce the real value of savings. Also, the longer you can leave your money invested, the better the chance you have of getting higher returns. Investments in the stock market will go up and down. If you need access to your money in the short-term there is no guarantee you'll get back all the money you've invested.

You should remember that taking any money out of your investment will reduce its value and the amount you take out could be greater than any growth achieved.

If your long-term goal is retirement, a pension could be an option for you as it's tax-efficient and you normally get tax relief on contributions you make to it.

Types of investment

As an execution-only service, we don't provide advice but we'll give you all the information you need to decide whether investing is right for you, plus some useful tools, to help you make your own decisions.

Ready-made investments

We have designed our ready-made investments to help you diversify your money across a range of markets, without the complexity of picking your own stocks and shares.

If you haven't invested before, or you prefer to leave it to the experts, our ready-made investments could be the right choice for you.

- ▶ **Choice** - you can choose between three funds with a level of risk you're comfortable with - progressive, balanced or cautious risk. Plus, you can hold them in an Investment ISA or an Investment Account.
- ▶ **Diversified** - our investments are ready-made so they give you exposure to a diverse mix of shares, bonds, property and more.
- ▶ **Flexible** - invest regularly from £50 per month, or with a minimum lump sum of £500.

Choosing your own investments

If you want to pick your own stocks and shares, we can help too.

- ▶ **Control** - you can create and build your own portfolio to meet your personal investment goals.
- ▶ **Variety** - choose from a wide range of investments, including our Select List of funds, shares in individual companies and exchange traded funds (ETFs) where you can track the market.

Pensions are a long-term investment. The retirement benefits you receive from your pension account will depend on a number of factors including the value of your account when you decide to take your benefits which isn't guaranteed, and can go down as well as up. The value of your account could fall below the amount(s) paid in.

Please remember that the value of an investment and the income from it can go down as well as up and you may get back less than you invested. If you are in any doubt about making your own investment decisions we recommend you seek advice from a suitably qualified financial adviser.

- Stay on top of the latest market news to help manage your portfolio effectively.
- Thousands of expert articles updated daily to help you find new investment opportunities.

Visit our investing hub at [bankofscotland/investing/understanding-investing.html](https://www.bankofscotland.co.uk/investing/understanding-investing.html) where we offer a variety of research tools and articles to help you take the next step on your investing journey.

Research centre

Use our research centre to read the latest news and insight, search and filter different investments, and track how an investment is performing.

TradePlans

TradePlans can either help you make the most of share price movements, or protect you from a sharp fall. They are automated trading tools which carry out your request to buy or sell investments at a price which you set. Available on UK equities only.

Before you apply

1

Keep some money for a rainy day

It's always a good idea to have some money on hand if the unexpected crops up – say three to six months' worth of income in a savings account. Think about what you might need if an emergency strikes.

2

Sort out any debt

Get your debts under control before thinking about investments. The interest you'll be paying on short-term loans and credit or store cards could be much more than the returns you'd get from an investment.

3

Make sure you're covered

You might want to think about life insurance, critical illness cover or income protection before you think about investing. Especially if you have a family or people who rely on the money you earn. If your employer offers these kinds of benefits, you should check to make sure you've got the correct cover in place.

Setting up your investment
